Notes:

Total sulphur, total carbon and carbonate carbon (CO_2; direct HCl method) by Leco furnace done at Acme Labs.

CO_2 Analysis: A 0.2g pf pulp sample is digested with 6 ml of 1.8N HCl in a hot water bath of 70˚C for 30 minutes. The CO_2 that evolves is trapped in a gas chamber that is controled with a stopcock, once the stopcock is is opened the CO_2 gas is swept into the Leco analyser with a oxygen carrier gas. Leco then determines the CO_2 as total-carbon which is calculated to total CO_2.

Calculations:

**[1]: $CaCO_3$ Equivalent is based on Carbonate carbon (CO_2).*

**[2]: Sulphide sulphur by sodium carbonate leach method (where residue after extraction was submitted for total sulphur by Leco)*

**[3]: Insoluble sulphur is based on difference between total sulphur, sulphate sulphur and sulphide sulphur*

**[4]: Maximum Potential Acidity (MPA) is based on sulphide sulphur.*

**[5]: Net Neutralization Potential (NNP) is based on difference between Neutralization Potential (NP) and MPA.*

Note:

Stage 1: Initial pH of 15% H_2O_2: Batch 1: 5.52; Batch 2: 5.56 (all pH's measured at room temperature).

15% H_2O_2 solution was prepared from 30% H_2O_2 bulk solution and buffered with 0.5N NaOH.

Solid:Liquid ratio used = 1:100; 2.5g pulp sample:250ml 15% H_2O_2.

Initial NAG liquor pH & temperature was done on filtered sample.

As per procedure, stage 2 cycle is not to be carried out if stage 1 NAG liquor pH is greater than 4.5.

Procedure: Prediction Manual for Drainage Chemistry from Sulphidic Geologic Material. Version 0 - Dec. 2009. MEND Report 15.3; Pages 15-6; Sequential NAG Test.

Bold and green pH values are greater than 4.5 and are considered Uncertain unless there is evidence to support no further reaction

*MPA = 30.63 * %$S_{(sulphide)}$*

*ANC = 0.98 * Sobek NP*

Note:

Initial pH of 15% H_2O_2: 5.53 (all pH's measured at room temperature).

15% H_2O_2 solution was prepared from 30% H_2O_2 bulk solution and buffered with 0.5N NaOH.

Solid:Liquid Ratio: Varies (as per client request); please see table for details.

Procedure:

Based on "Prediction Manual for Drainage Chemistry from Sulphidic Geologic Material. Version 0 - Dec. 2009. MEND Report 15.3; Pages 15-6; Sequential NAG Test".

Duplicate = is a repeat of the entire NAG procedure.

Appendix 5.3-5
Post-NAG Test Residue Results

Values in blue are calculated

Italics values in row 2 are detection limits

Values below detection limit are reported as half detection limit

Blank cells are due to insufficient sample

May 17, 2010

EXPERIMENTAL METHOD

The eight samples were reduced to the optimum grain-size range for quantitative X-ray analysis (<10 μm) by grinding under ethanol in a vibratory McCrone Micronising Mill for 7 minutes. Step-scan X-ray powder-diffraction data were collected over a range 3-80°2θ with CoKa radiation on a Bruker D8 Focus Bragg-Brentano diffractometer equipped with an Fe monochromator foil, 0.6 mm (0.3°) divergence slit, incident- and diffracted-beam Soller slits and a LynxEye detector. The long fine-focus Co X-ray tube was operated at 35 kV and 40 mA, using a take-off angle of 6°.

RESULTS

The X-ray diffractograms were analyzed using the International Centre for Diffraction Database PDF-4 and Search-Match software by Siemens (Bruker). X-ray powder-diffraction data of the samples were refined with Rietveld program Topas 4.2 (Bruker AXS). The results of quantitative phase analysis by Rietveld refinements are given in Table 1. These amounts represent the relative amounts of crystalline phases normalized to 100%. The Rietveld refinement plots are shown in Figures 1-8.

Table 1. Results of quantitative phase analysis (wt.%)

Rescan Environmental Services Ltd.
Sixth Floor, 1111 West Hastings Street
Vancouver, BC
V6E 2J3

Dear Mr. Mountjoy,

Re: Mineralogical Assessment of Tailing Samples KM2539

We are pleased to inform you that we have completed a program to assess the mineral composition of Rescan tailing stream samples. The objective of this program was to identify and quantify the mineral composition of the samples provided.

To complete this program, samples from five tailing streams were received weighing a total of approximately 1.9 kilograms. Upon receipt, the samples were homogenized and assayed for elements of interest in this program. The composition of minerals in each sample was determined using particle mineral analysis (PMA) techniques by QEMSCAN. Spectra for each mineral present, as well as back scatter micrographs for mineral phases of interest were also detected per the proposal for this study. The analysis was performed on unsized samples, but provided useful quantitative measurements of mineral content.

A summary of the PMA results is displayed in Table 1. Chalcopyrite was the dominant copper sulphide mineral present in all samples, with values ranging between <0.1 and 1.5 percent. Pyrite was the dominant sulphide mineral in all samples. More than 50 percent of the sulphide tailings stream comprised of pyrite. The silicate minerals in the five

streams were dominated by quartz, with values ranging between 23 and 63 percent of the total samples by mass. Moderate levels of muscovite, feldspars and chlorite were also detected in these five samples.

TABLE 1
MINERAL COMPOSITION OF RESCAN TAILING SAMPLES

Minerals	Sulphide Tailings	Rougher /Sulphide	Rougher Fine	Rougher Coarse	Rougher Tailings
Chalcopyrite	1.5	0.1	<0.1	0.2	<0.1
Galena	<0.1	<0.1	<0.1	<0.1	<0.1
Sphalerite	0.1	<0.1	<0.1	<0.1	<0.1
Molybdenite	0.1	<0.1	<0.1	<0.1	<0.1
Pyrite	54.8	4.0	0.1	0.1	0.1
Hematite	0.4	0.8	1.0	0.6	0.6
Steel	0.3	0.1	<0.1	<0.1	0.1
Quartz	22.9	53.0	49.7	63.2	54.2
Muscovite	8.3	21.9	24.8	16.9	23.7
K-Feldspars	2.0	4.3	5.7	6.5	5.5
Feldspar_Albite	2.7	5.2	6.1	5.8	5.4
Chlorite	1.9	4.5	5.2	2.6	4.5
Calcite	0.8	1.1	2.3	0.9	1.8
Others	4.5	5.0	5.2	3.4	4.2
Total	100	100	100	100	100

Note: Detailed mineralogical data can be located in Appendix III.

A detailed list of minerals present, along with the requested spectra data can be located in Appendices II and III. Thank you for choosing G & T Metallurgical Services Ltd. for your testing requirements. If you have any questions regarding this test program, please do not hesitate to contact us directly.

Yours truly,

Tom Shouldice, P.Eng.

APPENDIX I – KM2539

SAMPLE ORIGIN

1.0 Sample Origin

Five process tailing stream samples was received at G & T Metallurgical Services Ltd. on November 3, 2009. Upon receipt, the samples were homogenized with representative cuts removed for chemical analysis and mineralogical analysis. The results of the chemical analysis are summarized in Table I-1. The mineralogical analysis data are shown in Appendix III.
